which were observed, were a large, black, beaked beetle (*Rhynchophorus palmarum*), called kû'perû by the Cayapa, and a large white larva called kömtu'cû by them.

Certain other insects, though of no special economic importance, are of interest to the Indians. One in particular is a large beetle (*Euchroma goliath* L. & G.) whose iridescent wing-covers are employed in making necklaces. There are also large, beautifully colored buttertlies, dragonflies, and a large firefly (*Pyrophorus pellucens*), besides a host of other species of insects of greater or lesser interest.

Insects

English	Spanish	Cayapa
beetle (*Rhynchophorus palmarum*)		kû'perû
beetle (*Euchroma goliath* L. & G.)	cucaron	kabê'tsû
firefly (*Pyrophorus pellucens*)		mû'lûkû
lice		paba ta'nda ciñemi'skI ta'nda amûl a'ma
ant (a large, black, stinging ant)	conga	nyû'mI
larva (a large white larva)		kô'mucû
larva	cogoyo	avI'
a worm or caterpillar	hualpe	tcilI'll

MINERALS

Among the natural resources of the country should be mentioned its minerals, certain of which are found
